

ENROLLMENT PROJECTIONS FOR KNOX COUNTY SCHOOLS

2007/08-2016/17

October 31, 2006

ENROLLMENT PROJECTIONS FOR KNOX COUNTY SCHOOLS, 2007/08-2016/17: EXECUTIVE SUMMARY

October 31, 2006

I. INTRODUCTION

The Knoxville/Knox County Metropolitan Planning Commission (MPC), Knox County Schools (KCS), and Public Building Authority (PBA) have combined resources and expertise in a Partnership for Education Facilities Assessment (PEFA). The three agencies have collaborated on the development of 10-year enrollment projections for the area's 76 public schools that provide regular day instruction. The projections will play an important role in identifying areas in Knox County with the most pressing needs for education facilities.

This report includes three components: a) an overview of recent trends in public school enrollment, demographics, and land development; b) a series of enrollment projections for the Knox County Schools system as a whole; and, c) a series of school-by-school enrollment projections.

II. RECENT TRENDS

A. Systemwide Enrollment, 1992/93-2006/07

Over the past 15 years, total enrollment in regular day classes across the Knox County Schools system has been very stable. Modest year-to-year fluctuation between 0.0 and 1.4 percent from the period average of 51,298 was recorded in all years except 2006/07, when total enrollment climbed 2.3 percent over the previous year and was 3.5 percent greater than the 15-year average.

B. Grade Progression Ratios

Grade progression ratios (GPR) measure the advancement of a student *cohort* (a selected age-group or grade-level of students) through a school system between the first term of one

school year to the first term of the next (for example, enrollment in eighth grade in the first semester of 2005 compared to enrollment in ninth grade in the first semester of 2006). The ratio will equal 1.0 if no students are lost or gained from one year to the next. A ratio less than 1.0 indicates a loss, typically due to drop-out, transfer, out-migration, and movement to private schools or home schools. A ratio greater than 1.0 is indicative of a net gain in students over the course of the year, due to new residential development, in-migration, and the transition of students into the public school system from private schools or home schools.

GPRs were calculated for the Knox County Schools system for the past 15 years. Notable were the GPRs consistently greater than 1.0 between kindergarten and first grade, the result of children moving out of private preschool/kindergarten programs into the public school system. There was some loss of students between first and second grades, but the system maintained consistent progression levels from year to year throughout the remainder of the elementary and middle school grades. Gains were seen in ninth grade enrollments throughout the 15-year study period, indicated by GPRs greater than 1.0. Many students entered the public school system from private schools that do not offer high school programs or from homeschool situations when families opted to participate in the expanded curricular and extra-curricular programs offered in local high schools. After seeing increases in ninth grade enrollments, tallies consistently fell each grade thereafter as many high school students dropped out.

C. Vital Statistics

Between 1990 and 2002, Knox County birth figures were very consistent, ranging from 4,600

to 4,800 annually. During the same time period, the number of woman of child-bearing age (15 to 44 years old) steadily increased as the general population of Knox County grew, but the fertility rate dropped slightly, a trend consistent with that seen nationwide. In the last two years for which data have been reported, moderate changes were observed. The 2003 and 2004 birth totals climbed above 5,000, up 7.9 percent from the previous 13-year average of 4,712 births per year.

D. Kindergarten-to-Birth Ratios

To assess the impact of births on future enrollment in local public schools, the ratio between the number of kindergarten students and the number of children born five years earlier was measured (K-B ratio). Knox County's 4,702 births in 1990 were compared to the local public school kindergarten enrollment of 4,305 in 1995 and expressed as a ratio of 0.916. A ratio less than 1.0 is the result of factors such as infant mortality, out-migration, and enrollment in private kindergarten programs. A ratio greater than 1.0 is indicative of an influx of new residents.

The 12-year average K-B ratio for the KCS system was 0.851. During the first half of the 1990s, kindergarten enrollments grew, peaking in 1996/97 and resulting in a K-B ratio of 0.946. For the remainder of the 1990s, kindergarten enrollments declined and reached a low K-B ratio of 0.806. The trend reversed again in the past five years as modest growth in kindergarten enrollment was recorded.

E. Private School Enrollment

Since the 1990s, private school enrollment has grown sharply in Knox County. According to 1990 Census data, students in private schools comprised about 6.5 percent of total local

school-age population. By 2000, the share doubled as private school enrollment reached 13.2 percent. Recent figures indicate private enrollment has stabilized at the 13 percent mark.

F. Development Activity

As the local economy has moved out of recessionary conditions that first emerged in 2001, the pace of residential construction activity has accelerated. The number of residential units approved by building permits issued between 2003 and 2006 averaged 3,987 per year, up 500 units per year as compared to the 1993 to 2002 average. However, Knox County has seen this type of spike in development activity before, as shown in the annual totals reported in 1996 and 1997. Typically, Knox County growth is solid and steady, with few peaks or valleys as sharp as those experienced elsewhere in the country during periods of economic boom and bust.

Single-family units comprise an average share of 62.6 percent of all residential units built each year in Knox County. Accelerated building rates show higher-than-average amounts of single-family homes in three of the past four years.

Average household sizes have been slowly shrinking locally for the past 30 years, consistent with regional and national trends. Although more homes are added to the Knox County inventory each year, there are fewer people living in them, including residents of school age. Additionally, condo and multi-family units capture sizeable shares of new development each year, and these types of units typically are marketed to empty-nesters, young professionals, and other lifestyles that include fewer school-age children.

III. PROJECTION METHODOLOGY

A. Cohort-Survival Technique

A cohort-survival technique was used as the basis of the Knox County Schools enrollment projections. The actual enrollment in regular day instruction in 2006/07 provided the starting population for the projections, and subsequent years were first projected by carrying the current enrollment forward through its grade progressions, from the 2007/08 school year to 2016/17, covering a 10-year time horizon.

B. Grade Progression Ratios

Using locally-observed averages in grade progression ratios, the 2006/07 enrollment was adjusted grade-by-grade, year-by-year to accommodate future enrollment change factors such as net migration (in- and out-movement of families), transfers, and shifts between public and private school.

C. Kindergarten Projections

To forecast kindergartners, local birth figures were used. Since enrollment in kindergarten is function of the number of births five years earlier, actual birth figures from 2002 were tabulated and adjusted (using kindergarten-to-birth ratios) to represent kindergarten enrollment for the 2007/08 school year. This step was repeated for kindergarten enrollments for 2008/09 and 2009/10. Actual birth counts were available locally only to 2004, therefore, birth projections were calculated for 2005 through 2011 and used in the enrollment model for kindergarten projections for school years 2010/11 through 2016/17.

D. Geographic Scale Of Analysis

School-level projections (not the systemwide projections) were compiled at the *traffic analysis zone* (TAZ) scale. TAZs are small geographic areas used by the Census Bureau and MPC planners to more closely study local demographic activity. (Knox County is comprised of 433 TAZs.) Because school zone

boundaries change from time to time, it is not possible to examine historical trends in population and enrollment data for individual schools. Also, since changes can occur in the near future, it would be shortsighted to generate a set of 10-year projections for zones that may cease to exist. Instead, the TAZs were chosen for the projections because their boundaries are very stable, and they readily fit within any school zone definition.

E. Projection Scenarios

Three 10-year public school enrollment projection scenarios were developed to offer moderate, high, and low growth outcomes, with variations tied to high and low limits to average grade progression ratios, average kindergarten-to-birth ratios, and projected births. Projections were generated for the Knox County Schools system as a whole and for each school within the system.

IV. FINDINGS

Under the moderate growth scenario, the Knox County public school system can expect enrollments to steadily grow over the next 10 years, adding an average 313 students annually for a 5.9 percent increase systemwide. Much of the growth will occur in the elementary school ranks, accounting for 80 percent of the 10-year climb. Continued housing construction and projected increases in local births will drive the gains in future elementary enrollments. Middle schools will see enrollment growth also, adding 814 new students to annual totals by 2016/17. Systemwide high school enrollment is expected to drop slightly, with 2016/17 numbers totaling 16,125, down 1.1 percent from current figures. This finding is consistent with observed decreases in late-1990s/early-2000s elementary enrollments. The smaller cohorts currently in the elementary schools will move through the high school system during the 10-year forecast period.

The high growth projection scenario offers a more aggressive rate of increase systemwide. Enrollments will climb 13.4 percent overall, with sizeable increases seen at all three school levels. With 7,134 more students in the system,

total enrollments systemwide will reach 60,224 by 2016/17 under the high growth model.

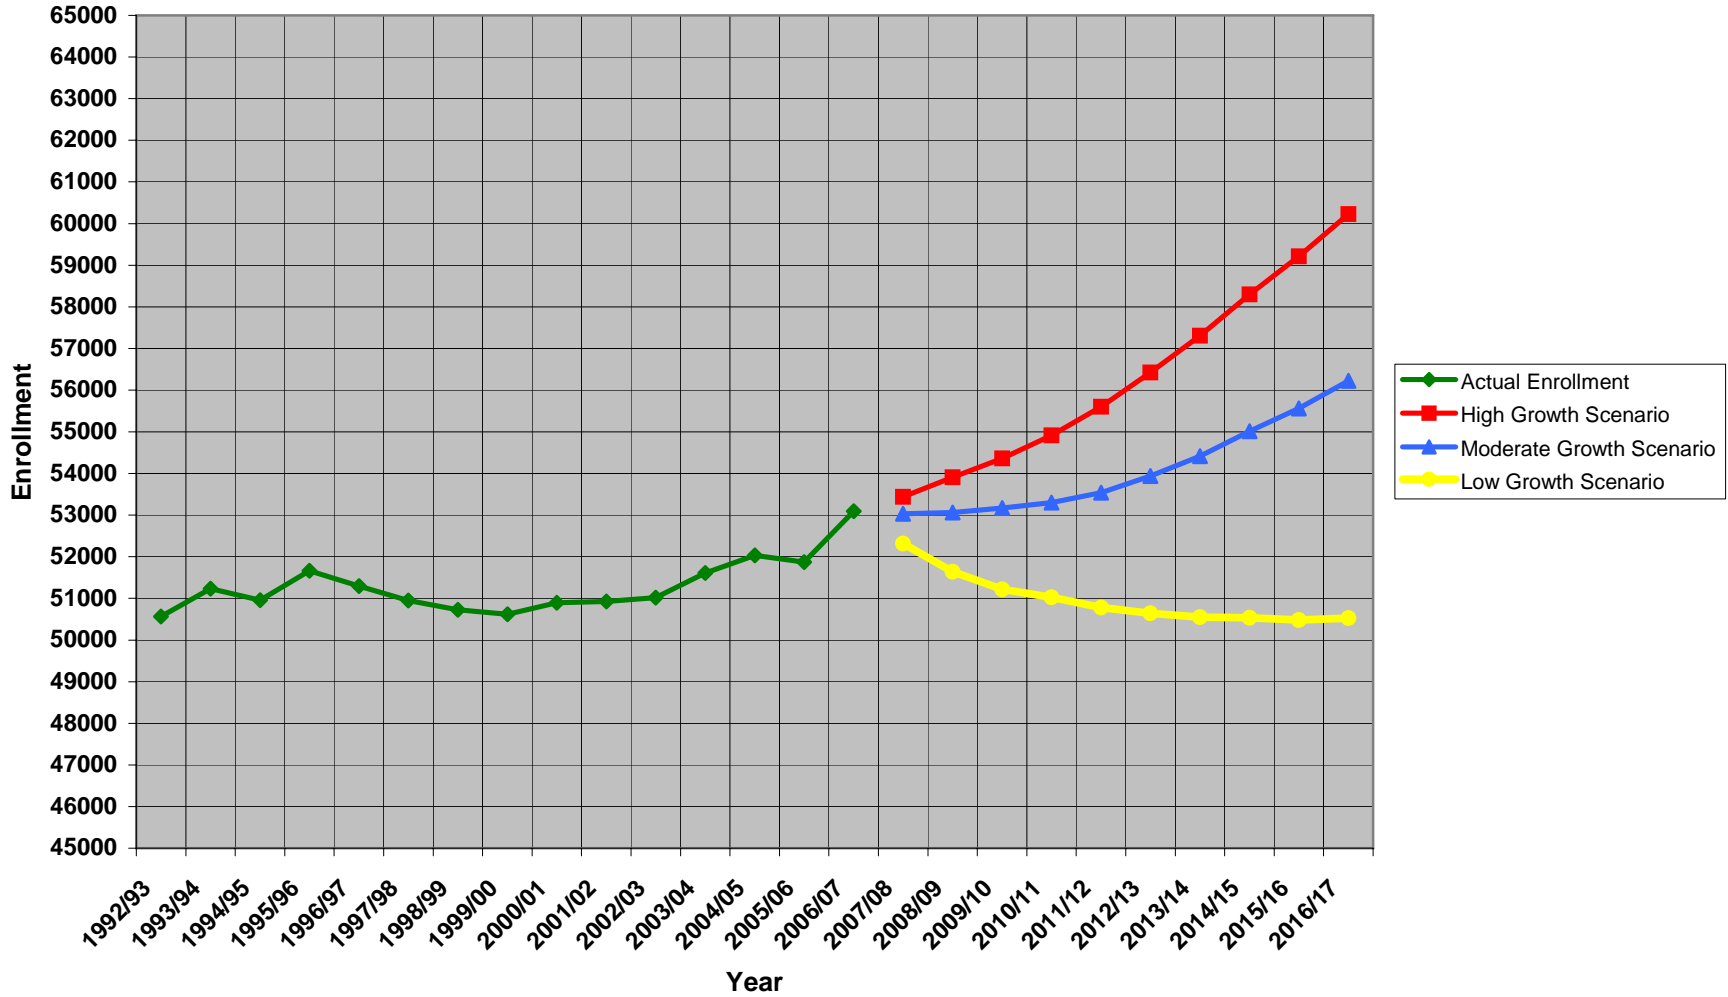

A starkly different picture is seen with the low growth scenario. Total enrollment will drop to

50,524 students in 10 years, down 4.8 percent from current levels if the demographic factors driving this model occur. Largest enrollment losses will be observed in local high schools, reporting nearly 13 percent declines.

ENROLLMENT PROJECTIONS FOR KNOX COUNTY SCHOOLS, 2007/08-2016/17

October 31, 2006

I. INTRODUCTION

The Knoxville/Knox County Metropolitan Planning Commission (MPC), Knox County Schools (KCS), and Public Building Authority (PBA) have combined resources and expertise in a Partnership for Education Facilities Assessment (PEFA). The group has been challenged to identify and prioritize needs for public education infrastructure in the face of limited fiscal resources. As part of this effort, the three agencies have collaborated on the development of 10-year enrollment projections for the area's 76 public schools that provide regular day instruction. The projections will play an important role in identifying areas in Knox County with the most pressing needs for education facilities.

This report includes three components: a) an overview of recent trends in public school enrollment, demographics, and land development, all comprising the basis of an enrollment projection model; b) a series of enrollment projections for the Knox County Schools system as a whole, with details on the projection methodology; and, c) a series of school-by-school enrollment projections, along with a summary of the underlying methods.

between public and private education opportunities, and trends in local development activity. Each of these factors has been considered in this study, and brief findings are reported here.

II. RECENT TRENDS

Several factors are evaluated in the development of enrollment projections for public schools. Chief among them are past and current enrollments, birth trends, the split

A. Systemwide Enrollment, 1992/93-2006/07
Over the past 15 years, total enrollment in regular day classes across the Knox County Schools system has been very stable (Table 1). Modest year-to-year fluctuation between 0.0 and 1.4 percent from the period average of 51,298 was recorded in all years except 2006/07, when total enrollment climbed 2.3 percent over the previous year and was 3.5 percent greater than the 15-year average.

Source: Compiled by the Knoxville/Knox County Metropolitan Planning Commission from Knox County Schools attendance data (Period 2 reports each year).

Similar to systemwide observations, very minor enrollment changes occurred from year to year among the area's elementary schools, ranging from 0.4 to 2.6 percent adjustments annually. A trend of minor decline was observed from the mid-1990s through 2002/03, after which a modest turnaround occurred. The 15-year change was a 0.2 percent decrease in total elementary enrollment (Table 2). More variation

occurred among the middle schools, notching a 5.5 percent increase from 1992/93 to 2006/07, but between-year differences ranged from 0.1 to 3.2 percent, similar to those recorded for elementary schools. High schools also showed modest annual changes over the past 15 years, however, unlike elementary schools, the period was characterized almost entirely by slow but continued growth. As a result, the overall high

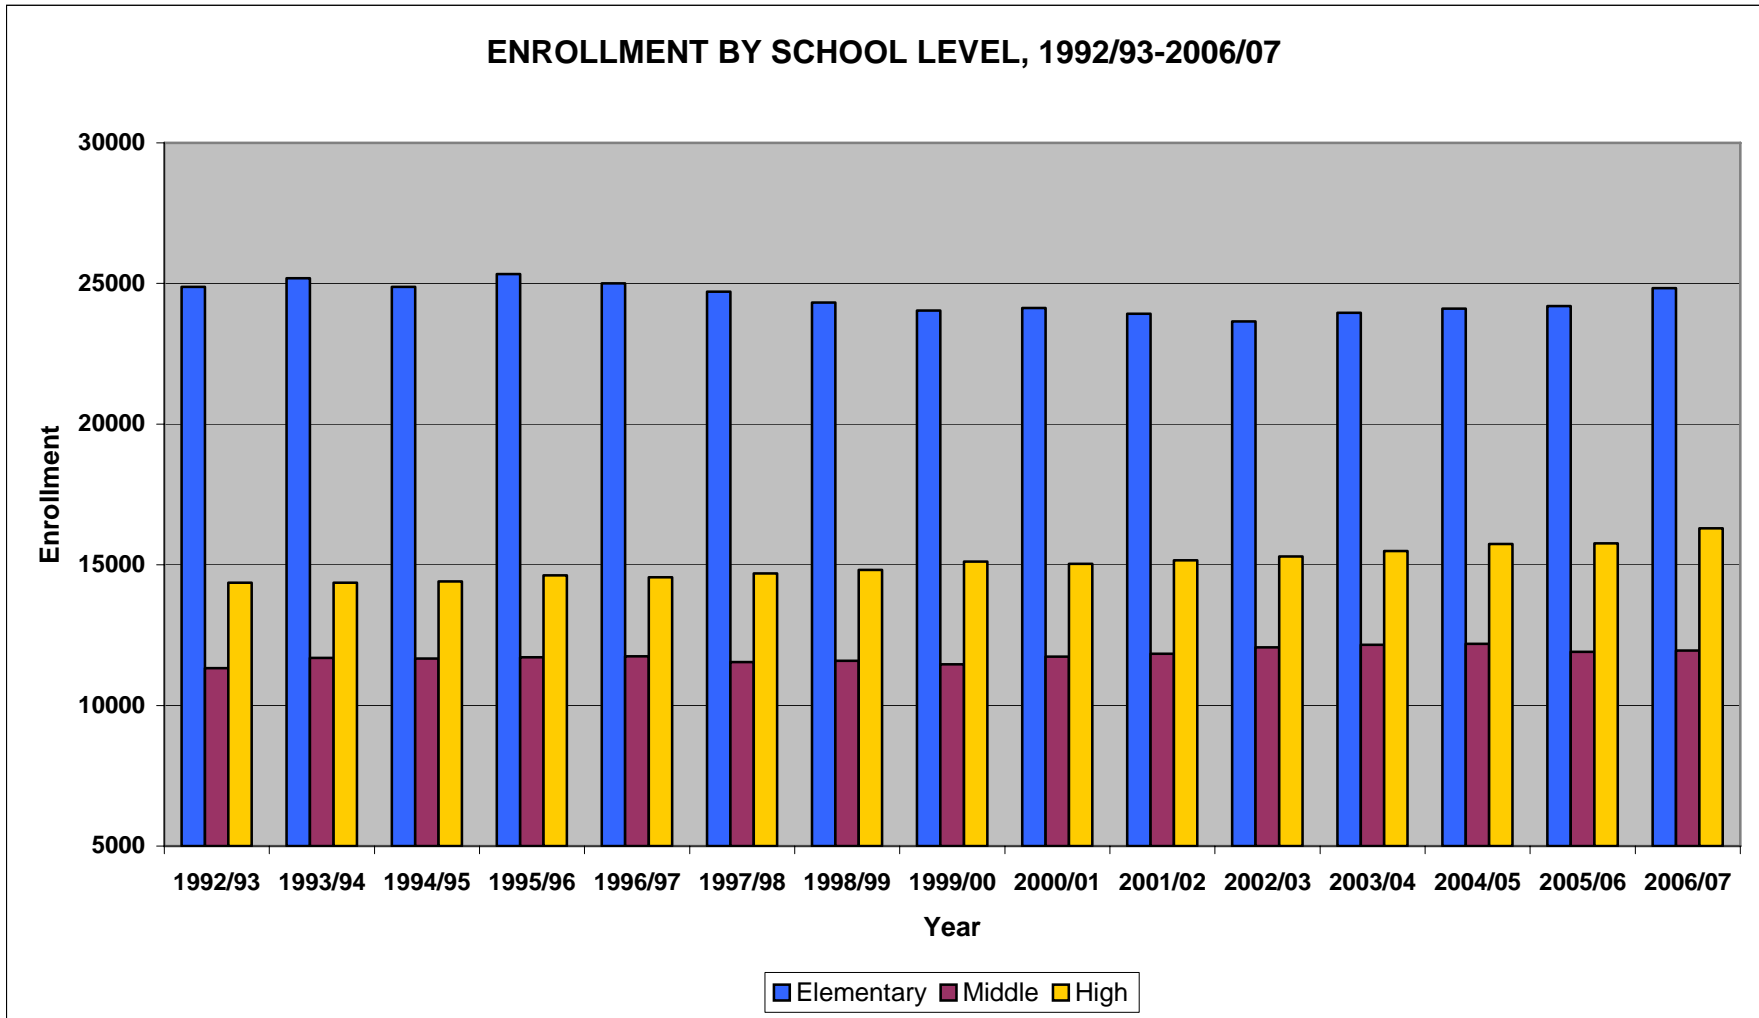

school enrollment change from 1992/93 to 2006/07 was 13.5 percent. A portion of the year-to-year fluctuation in high school enrollments is attributed to variations in the number of drop-outs. Not factors in elementary and middle schools, drop-outs have a noticeable impact on high schools, particularly in the transition from eleventh to twelfth grade (Figure 1).

Figure 1

B. Grade Progression Ratios

Grade progression ratios (GPR) measure the advancement of a student *cohort* (a selected age-group or grade-level of students) through a school system between the first term of one school year to the first term of the next (for example, enrollment in eighth grade in the first semester of 2005 compared to enrollment in ninth grade in the first semester of 2006). The ratio between the two numbers will equal 1.0 if no students are lost or gained from one year to the next. A ratio less than 1.0 indicates a loss of students, typically due to drop-out, transfer, out-migration of families, and movement to private schools or home schools. A ratio greater than

1.0 is indicative of a net gain in students of the selected cohort over the course of the year, due to new residential development in the area, in-migration of families, and the transition of students into the public school system from private schools or home schools.

GPRs were calculated for the Knox County Schools system for the past 15 years (Table 3). Notable were the GPRs consistently greater than 1.0 between kindergarten and first grade, the result of children moving out of private preschool/kindergarten programs into the public school system. There was some loss of students between first and second grades, but

the system maintained consistent progression levels from year to year throughout the remainder of the elementary and middle school grades. KCS recorded gains in ninth grade enrollments throughout the 15-year study period, indicated by GPRs greater than 1.0. Many students entered the public school system from private schools that do not offer high school programs or from homeschool situations when families opted to participate in the expanded curricular and extra-curricular programs offered in local high schools. After seeing increases in ninth grade enrollments, tallies consistently fell each grade thereafter as many high school students dropped out (Figures 2 and 3).

Figure 2

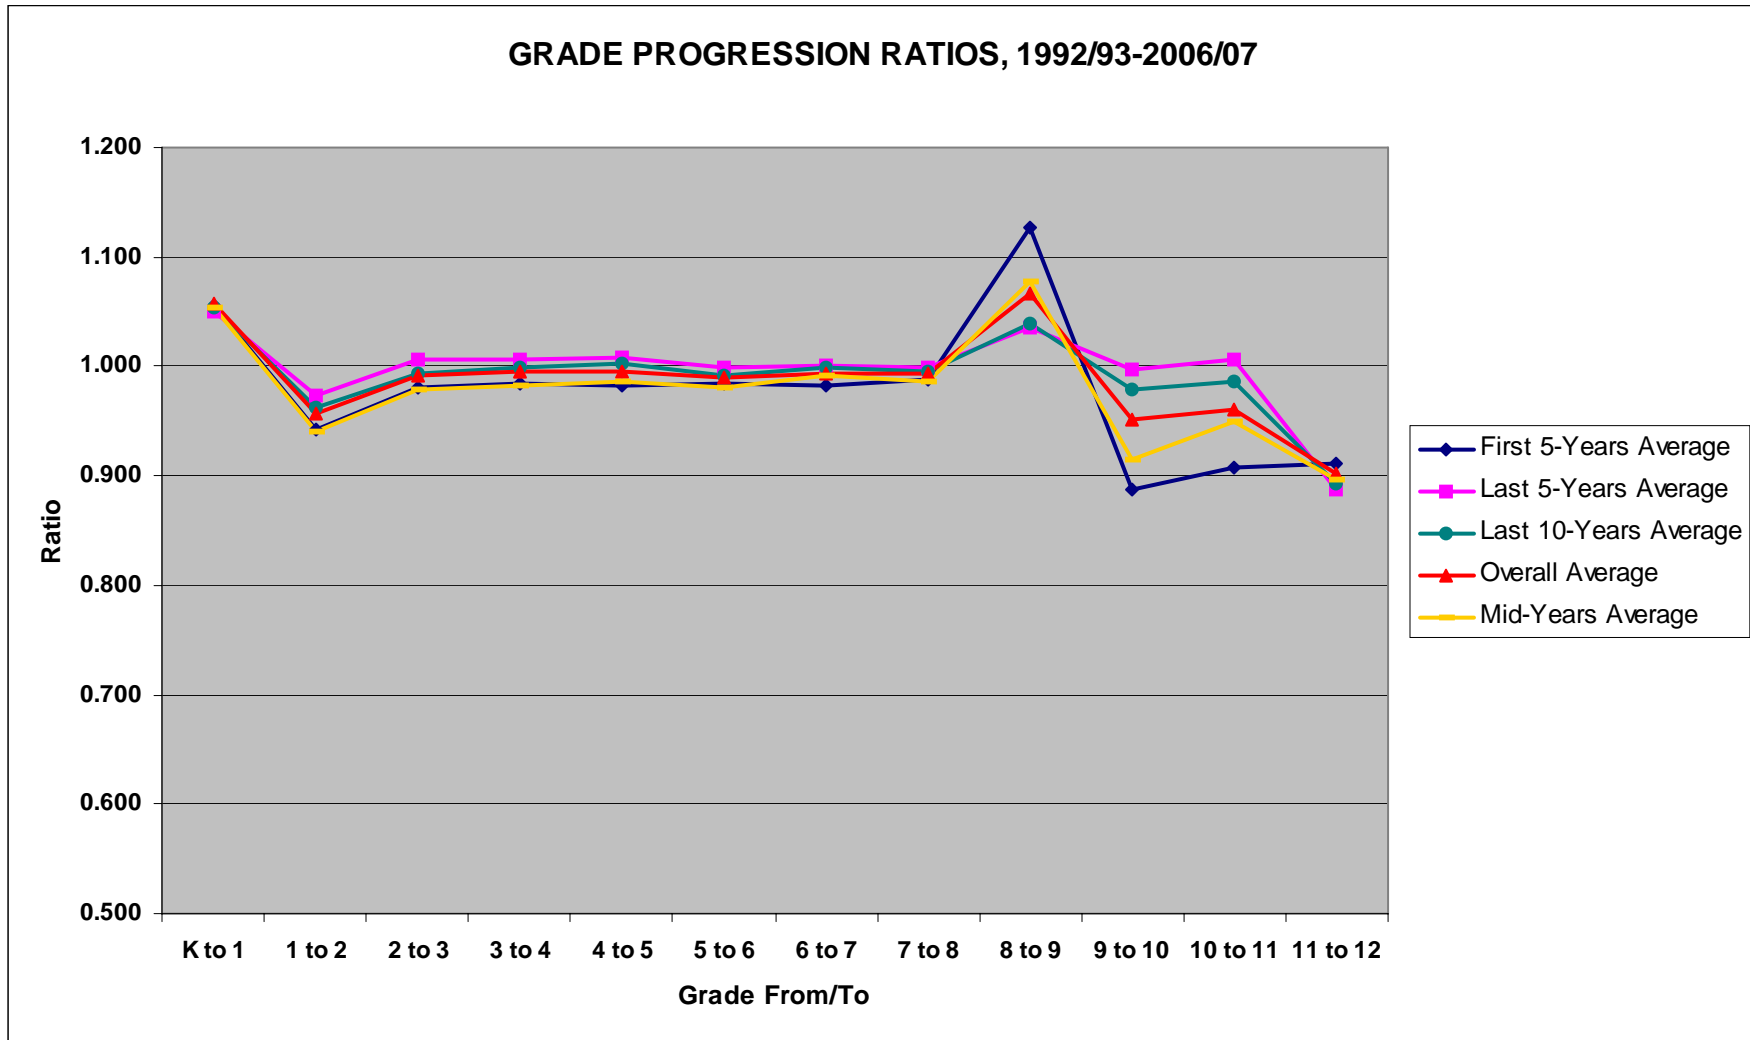

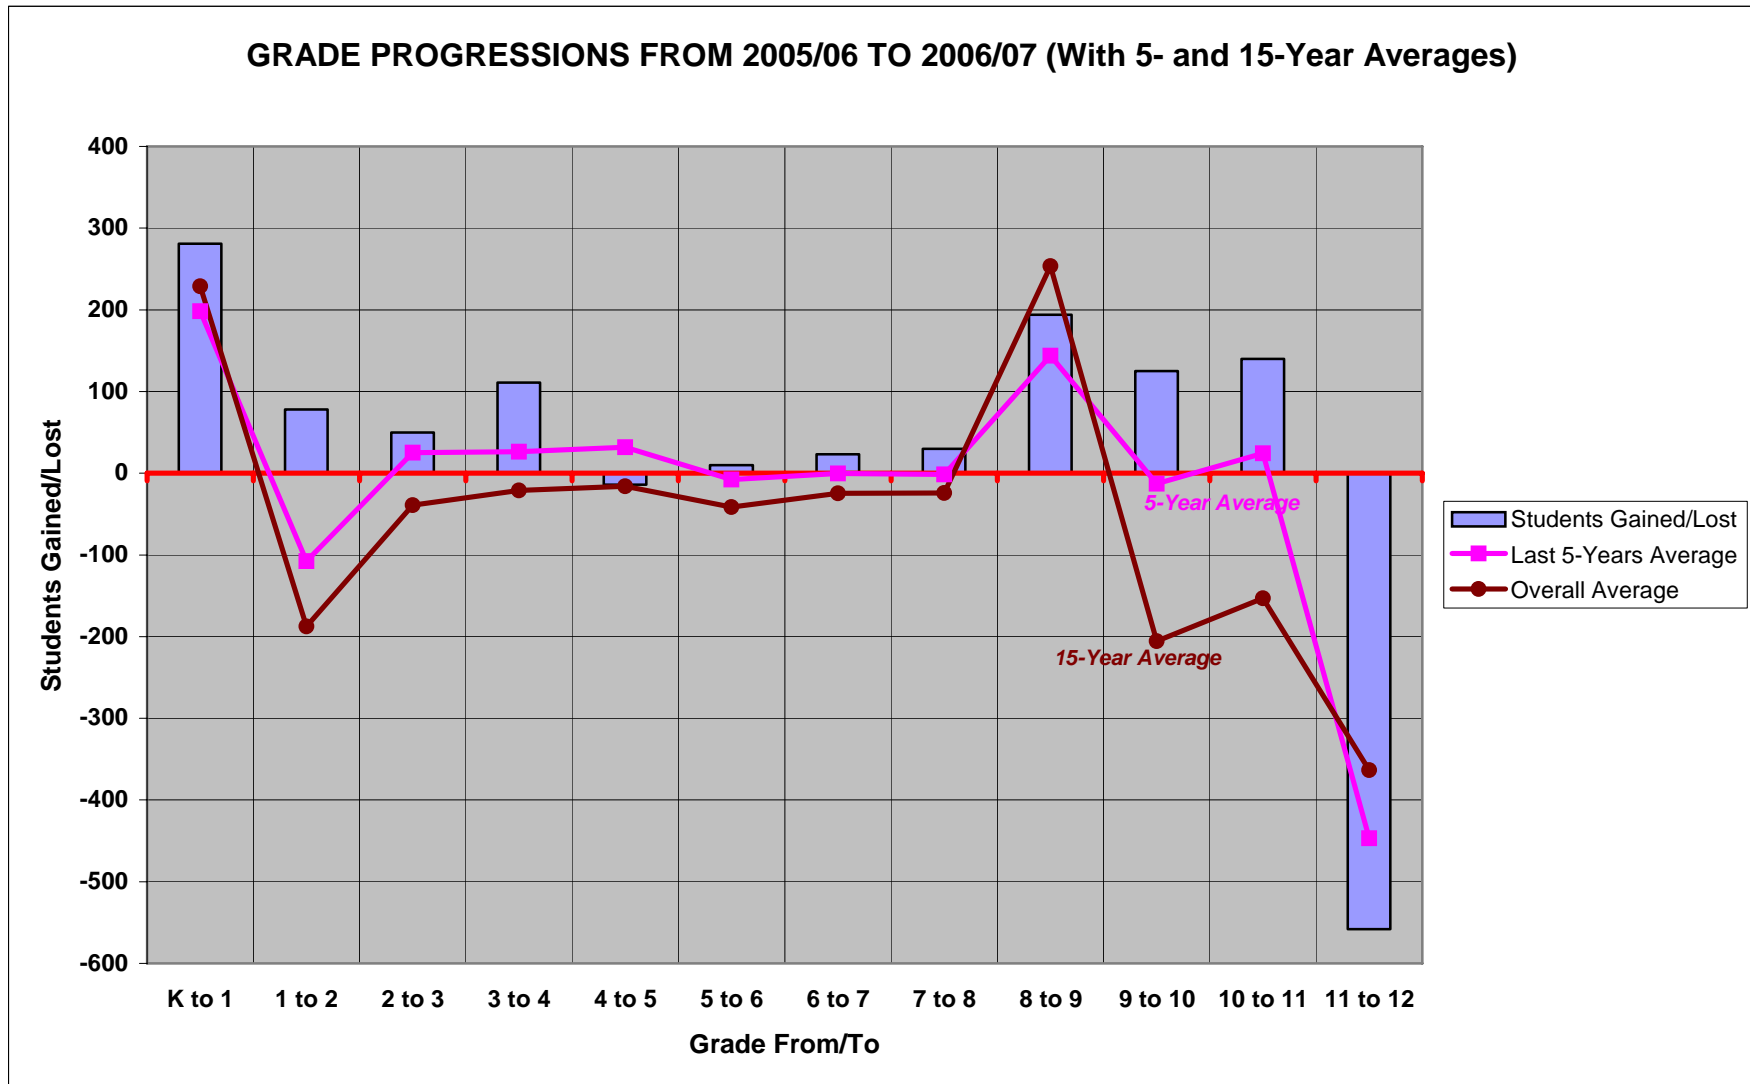

Figure 3

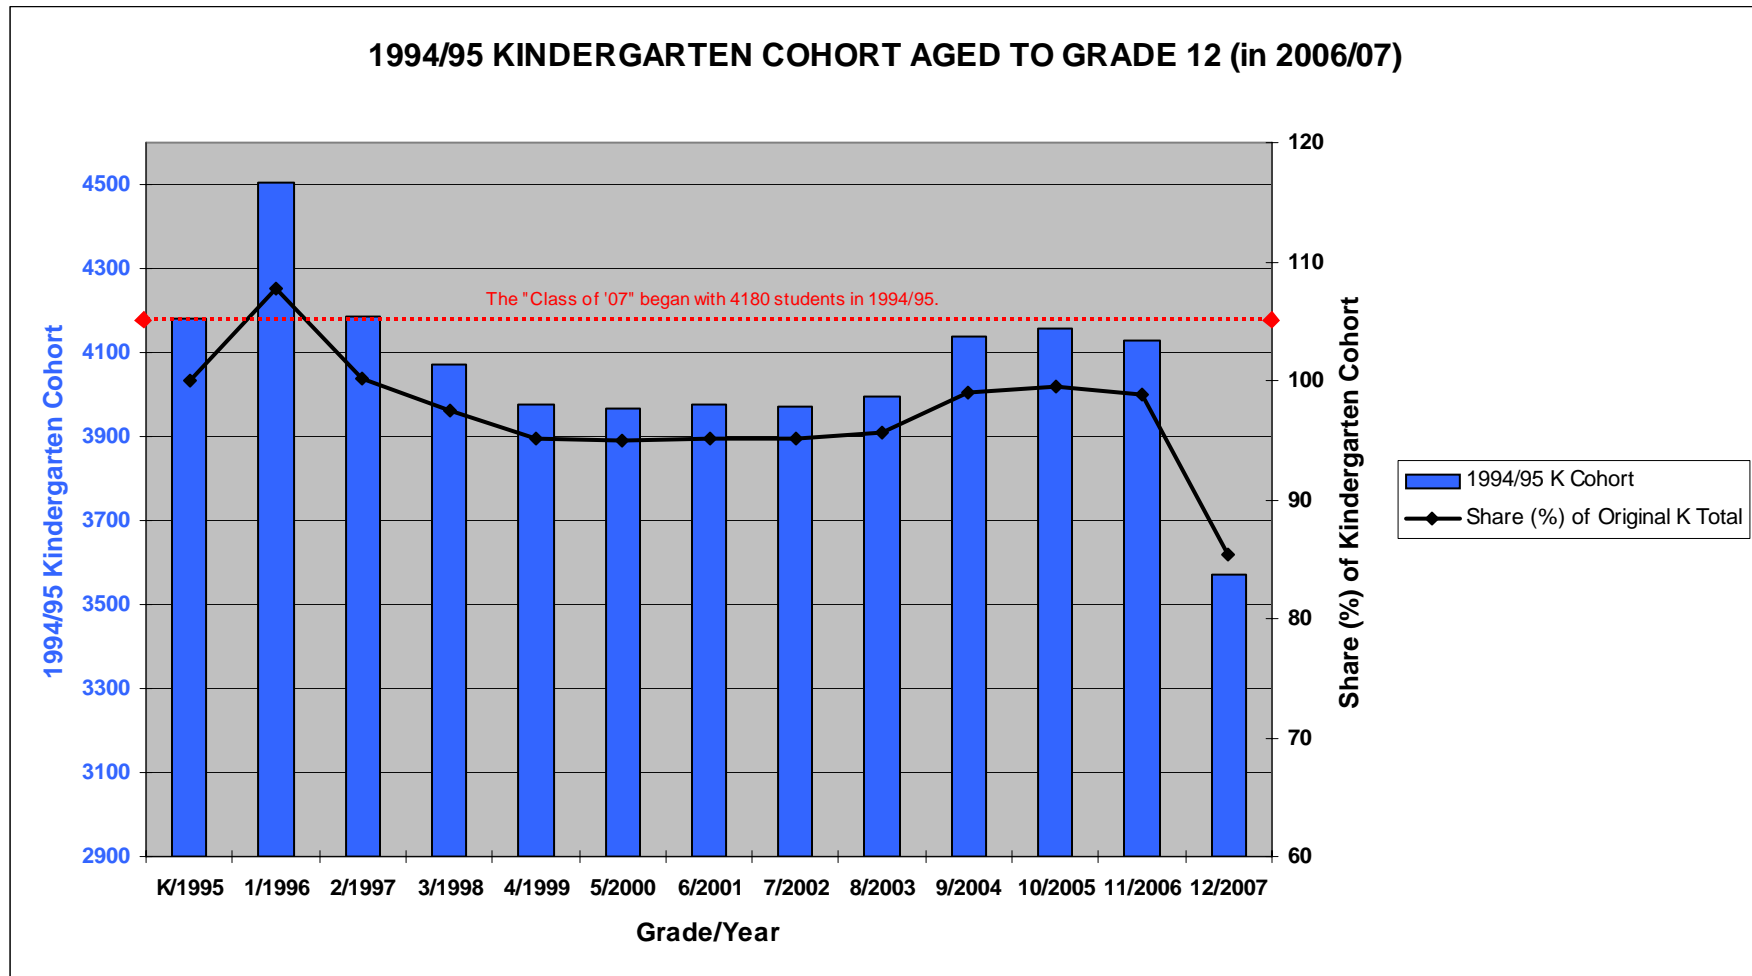

Using a 13-year school enrollment history, the 1994/95 kindergarten cohort in the KCS system was tracked grade by grade to the first semester of twelfth grade (Figure 4). The number of students entering the system in the Fall of 1994 was 4,180. The class grew by 325 students in first grade, comprising an enrollment share of

107.8 percent of the original class. After declines in second and third grade, the share of the original class was stable at 95 percent throughout the remainder of the elementary and middle school years. An influx of students in ninth grade brought enrollments to 99 percent of the original class size, but the final progression

from eleventh to the twelfth grade marked the greatest decrease in the original enrollment. The initial 4,180 students that entered the class of 2007 back in the Fall of 1994 shrunk to 3,572, or 85.5 percent, by the first semester of twelfth grade.

Figure 4

C. Vital Statistics

Another important component in the development of school enrollment projections is the number of births and deaths in an area. Between 1990 and 2002, Knox County birth figures were very consistent, ranging from 4,600 to 4,800 annually (Table 4). During the same time period, the number of woman of child-bearing age (15 to 44 years old) steadily increased as the general population of Knox County grew, but the fertility rate dropped

slightly, a trend consistent with that seen nationwide. While there were more women of child-bearing age in the local population, they were having fewer children, the net effect of which was stability in the overall number of births.

In the last two years for which data have been reported, moderate changes were observed. The 2003 and 2004 birth totals climbed above

5,000, up 7.9 percent from the previous 13-year average of 4,712 births per year. The recent fertility rate jumped to 58.8 births per 1,000 women, up from the 54.9 average measured between 1990 and 2002.

The number of deaths in Knox County has averaged 3,405 over the past 15 years with no notable changes to the crude death rate during the period (Figure 5).

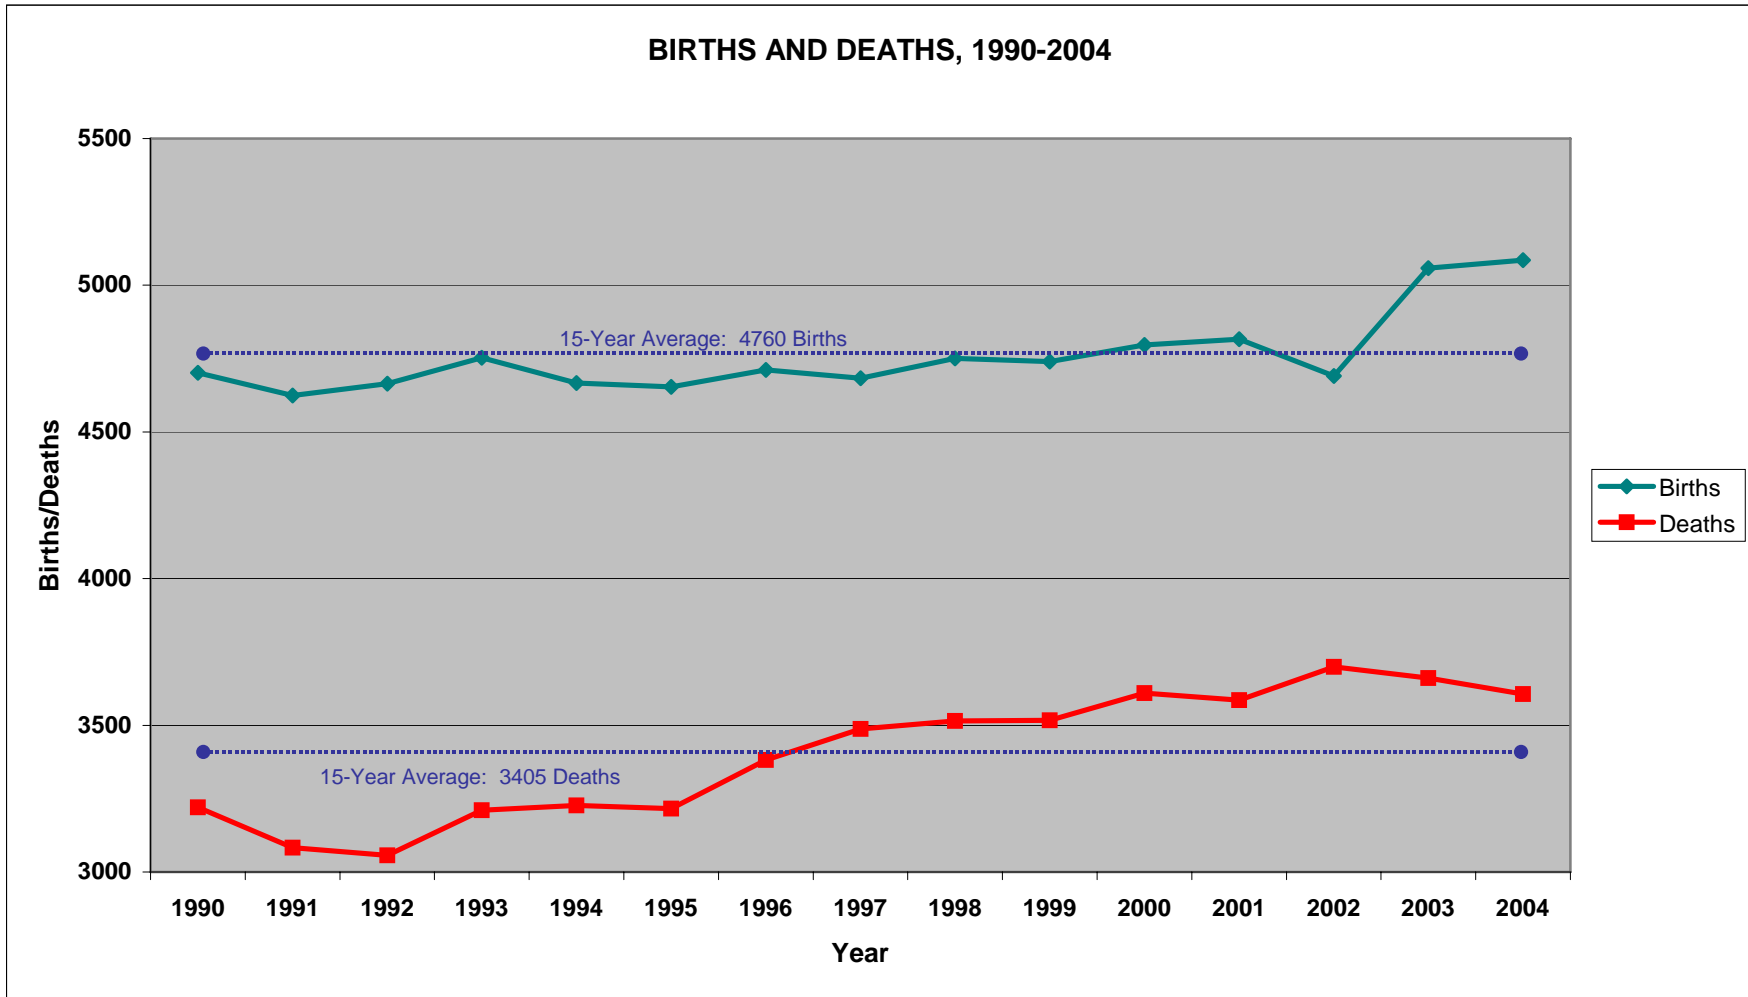

**Table 4: Vital Statistics, 1990-2004
Knox County**

Year	Births	Fertility Rate	Deaths	Crude Death Rate

Notes:

1. Birth and death figures for 1990 through 2004 reported by the Tennessee Department of Health.
2. Fertility rate = Total births per 1000 females aged 15-44 years.
3. Crude death rate = Total deaths per 1000 population.

Figure 5

D. Kindergarten-to-Birth Ratios

To assess the impact of births on future enrollment in local public schools, the ratio between the number of kindergarten students and the number of children born five years earlier was measured (K-B ratio). To illustrate, Knox County's 4,702 births in 1990 were compared to the local public school kindergarten enrollment of 4,305 in 1995 and expressed as a ratio of 0.916. A ratio less than 1.0 is the net

result of a combination of factors such as infant mortality, out-migration, and enrollment in private kindergarten programs. A ratio greater than 1.0 is indicative of an influx of new residents.

Using birth data from 1990 to 2001 and kindergarten enrollments from the 1995/96 to 2006/07 school years, kindergarten-to-birth ratios were calculated for the KCS system

(Table 5). The 12-year average ratio was 0.851. During the first half of the 1990s, kindergarten enrollments grew, peaking in 1996/97 and resulting in a K-B ratio of 0.946. For the remainder of the 1990s, kindergarten enrollments declined and reached a low of 3,763 in 1999/00, showing a K-B ratio of 0.806. The trend reversed again in the past five years as modest growth in kindergarten enrollment has been recorded (Figures 6 and 7).

Figure 6

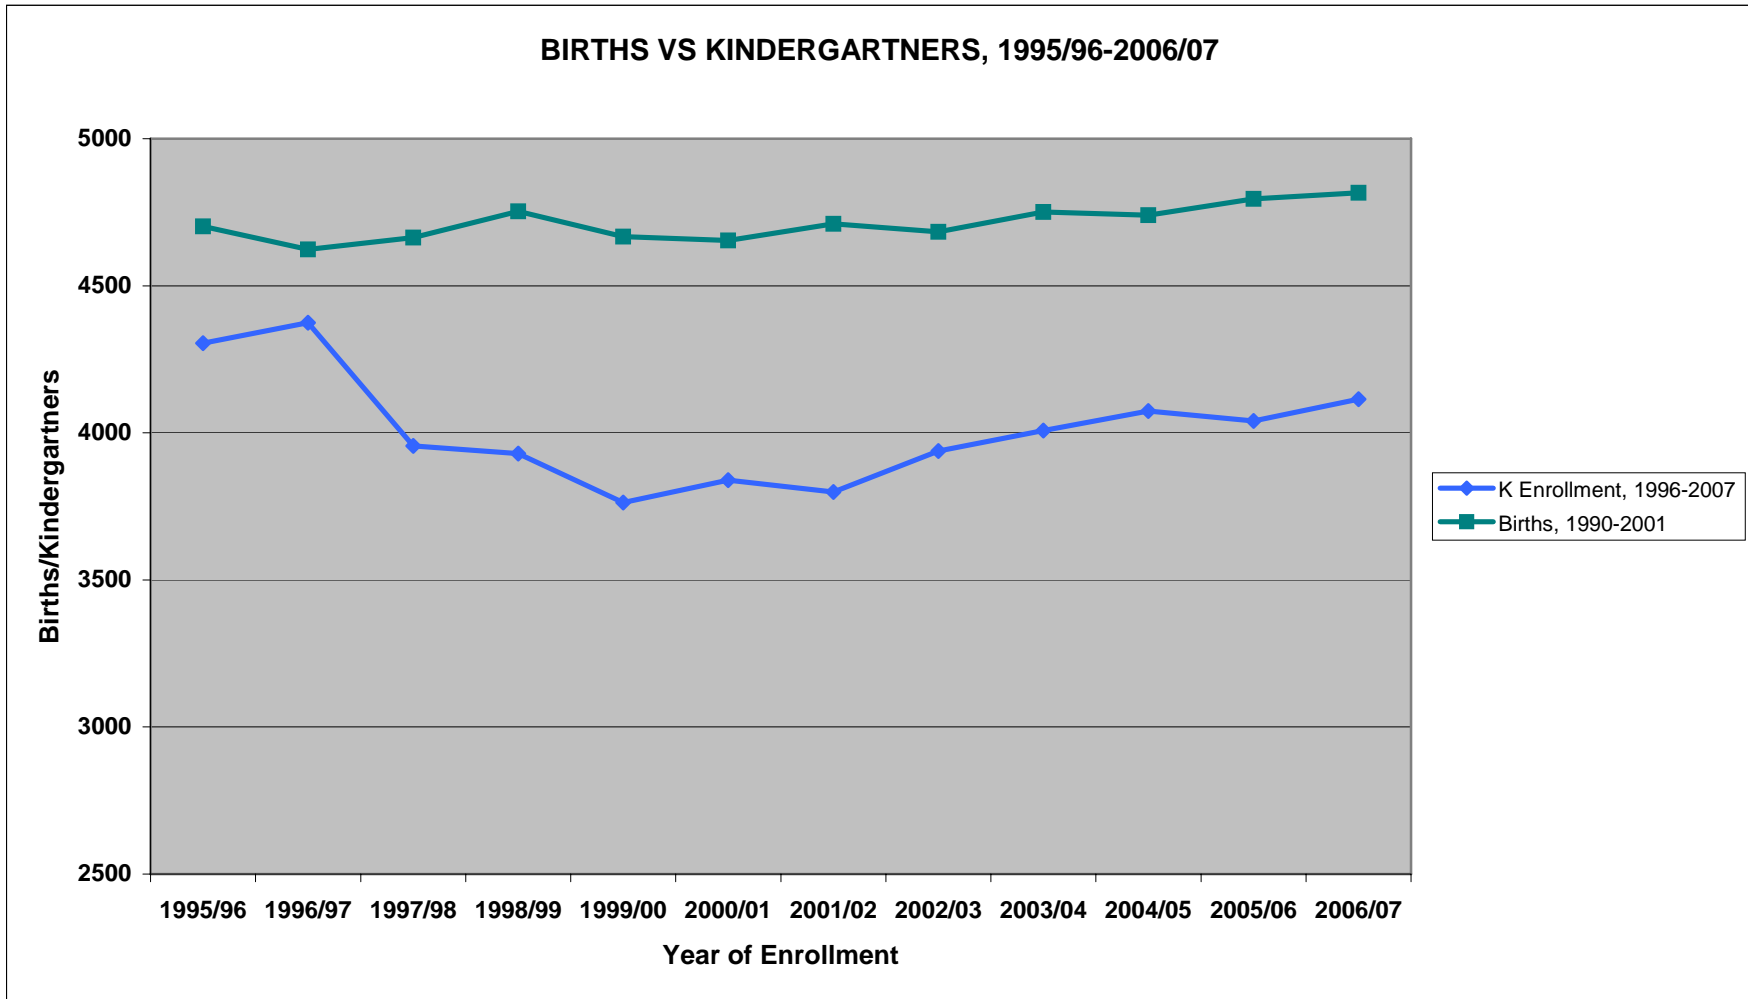

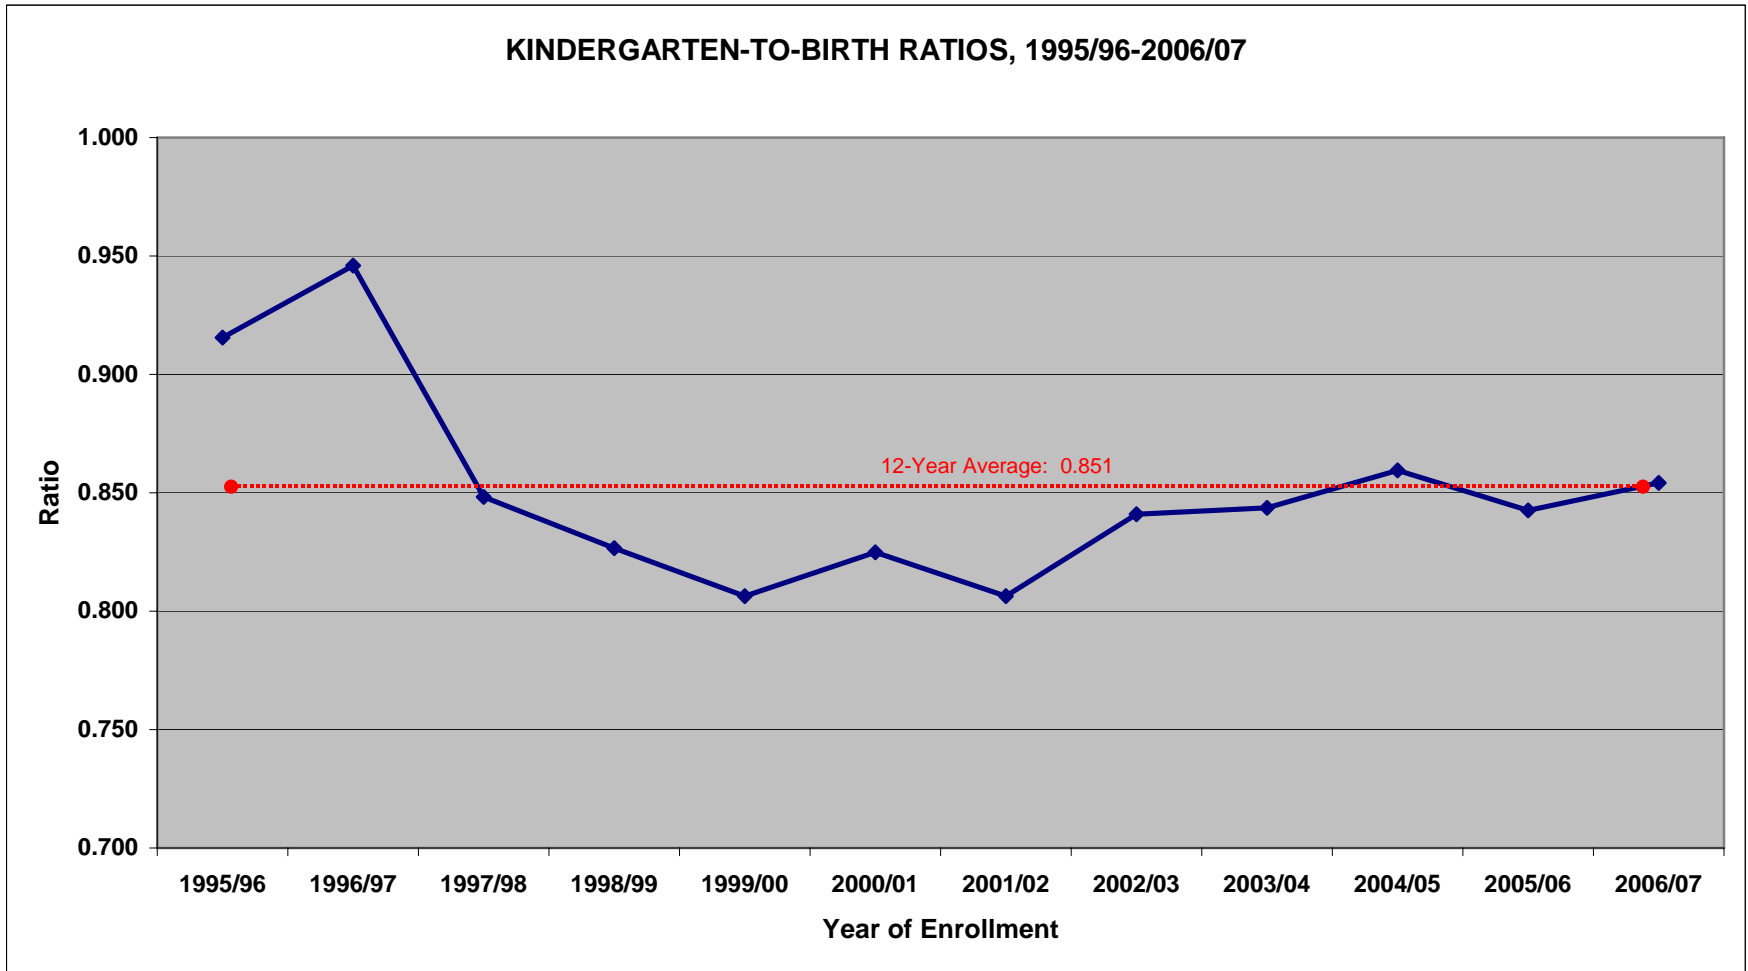

Figure 7

E. Private School Enrollment

Kindergarten-to-birth ratios and grade progression ratios that fall below a value of 1.0 are partly indicative of losses of students to private and home schools. Since the 1990s,

private school enrollment has grown sharply in Knox County (Table 6). According to 1990 Census data, students in private schools comprised about 6.5 percent of total local enrollment. By 2000, the share doubled as

private school enrollment reached 13.2 percent. Recent figures from the Census Bureau's *American Community Survey* indicate the move toward private education has stabilized in the 13 percent range (Table 7).

F. Public School Population Compared to General Population

Between 1993 and 2005, Knox County saw steady declines in its population shares held by younger public school children (Table 8). Shares of total population held by elementary school children dropped from 7.0 percent in 1993 to 6.0 percent in 2005, the result of at least two factors. First, the number of children

enrolled in private schools or homeschools increased steadily throughout the 1990s. Second, while the overall population grew countywide, the increases were among older residents, not persons of elementary school age.

Between 1993 and 2000, the shares of children in public middle and high schools trended downward slightly, ranging from 3.2 to 3.0

percent of countywide population from year to year for middle school population, and 4.1 to 3.9 percent for high schoolers. Since 2001, both groups have kept pace with the overall growth in the general population.

Total county population growth was modest over the past 13 years, averaging 1.1 percent per year.

G. Development Activity

Additions to housing stock can have a significant impact on current and future school enrollments. As the local economy has moved out of recessionary conditions that first emerged in 2001, the pace of residential development activity has accelerated. The number of residential units approved by building permits

issued between 2003 and 2006 averaged 3,987 per year, up 500 units compared to the 1993 to 2002 average (Table 9 and Figure 8). However, Knox County has seen this type of spike in development activity before, as shown in the annual totals reported in 1996 and 1997. Typically, Knox County growth is solid and steady, with few peaks or valleys as sharp as

those experienced elsewhere in the country during periods of economic boom and bust. If past trends carry forward into the near future, local development activity will stabilize and track with consistency the building permit averages reported since the early 1990s.

- Notes:
1. Residential permits include single-family detached, single-family attached, multi-family, and mobile home units.
 2. Total permit counts for 2006 are estimated for the entire year based on the average number of monthly approvals from January through July, 2006.

Source: Compiled by the Knoxville/Knox County Metropolitan Planning Commission from *Development Activity Reports*, 1993-2006.

Figure 8

While considering growth in residential activity, it is also necessary to understand that average household sizes have been slowly shrinking locally for the past 30-years. This trend is consistent with regional and national measures.

Although more homes are added to the Knox County inventory each year, there are fewer people living in them, including residents of school age. Additionally, condo and multi-family units capture sizeable shares of new

development each year, and these types of units typically are marketed to empty-nesters, young professionals, and other lifestyles that include fewer school-age children (Table 10).

Table 10: Average Number of Persons Under 18 Years of Age Per Occupied Housing Unit, By Unit Type

HOUSING UNIT TYPE	PERSONS <18 YEARS OLD PER UNIT
Single family detached	0.619
Single family attached	0.207
Multifamily	0.309
Mobile home	0.695

Source: Compiled by the Knoxville/Knox County Metropolitan Planning Commission from U.S. Census Bureau, *Census of Population and Housing, 2000*.

Single-family dwelling units attract families with higher numbers of school children. The share of total housing units captured by the single-family category has fluctuated widely over the past two

decades, ranging from a low of 53.1 percent in 1997 to a high of 76.3 percent in 1994 (Table 11 and Figure 9). On average, Knox County records single-family unit shares at an average

rate of 62.6 percent per year. The recent accelerated building rates show higher-than-average shares of single-family homes in three of the past four years.

III. SYSTEMWIDE ENROLLMENT PROJECTIONS

Ten-year enrollment projections were generated for the Knox County Schools system, both for the system as a whole, and for each of the 76 regular day schools operating within it. This section of the report presents the systemwide projections. The procedures followed in the development of the projections are detailed, and tables and graphics of the projection data are reported.

A. Methodology

1. Cohort-survival technique:

A cohort-survival technique was used as the basis of the systemwide enrollment projections. The actual enrollment in KCS regular day instruction in 2006/07 provided the starting population for the projections, and subsequent years were first projected by carrying the current enrollment forward through its grade progressions, from the 2007/08 school year to 2016/17, covering a 10-year time horizon.

2. Grade progression ratios:

Using locally-observed averages in grade progression ratios (calculated from KCS Period 2 Enrollment Reports, 1992/93 through 2006/07), the 2006/07 enrollment was adjusted grade-by-grade, year-by-year to accommodate future enrollment change factors such as net migration (in- and out-movement of families), transfers, and shifts between public and private school.

3. Kindergarten projections:

Actual enrollment figures and grade progression ratios covered a portion of the data needed for forecasting, but also necessary were counts and projections of kindergarten students beyond the current year's enrollment to keep the system populated with students throughout the

remainder of the projection period. To forecast kindergartners, local birth figures were used. Since enrollment in kindergarten is function of the number of births five years earlier, actual birth figures from 2002 were tabulated and adjusted (using kindergarten-to-birth ratios) to represent kindergarten enrollment for the 2007/08 school year. This step was repeated for kindergarten enrollments for 2008/09 and 2009/10. Actual birth counts were available locally only to 2004, therefore, birth projections were calculated for 2005 through 2011 and used in the enrollment model for kindergarten projections for school years 2010/11 through 2016/17.

High, moderate, and low growth birth projection series were generated (Table 12 and Figure 10). Two series were derived using *Forecast Pro*, a software program that provides several statistical models that analyze time series data. Statistical measures of model performance drove the selection of two curve fitting models, one representative of a high growth rate in future local births, the other tending toward a slower rate of increase. A third set of projections was taken from a commercial vendor of local projection data, Woods and Poole Economics. Their figures showed future births occurring at a level between the high and low marks recorded by the other statistical models and were, therefore, selected as a moderate growth outcome.

4. Methodology summary:

To summarize, the systemwide 10-year school enrollment projection model relied on the following data:

- a) Actual school enrollment, 2006/07.
- b) Grade progression ratios, 1992/93-2006/07.
- c) Actual births, 2002-2004.
- d) Projected births, 2005-2011.

- e) Kindergarten-to-birth ratios, 1995/96-2006/07.

The above projection factors were selected based on the following rationale:

- a) Grade progression ratios account for migration (in/out student movement due to new residential construction or family relocation) and transfers (in/out of the system between public and private education or to other school systems in the area).
- b) Births affect future kindergarten enrollments.
- c) Kindergarten-to-birth ratios gauge enrollment in public schools (rather than private schools and home schools).

B. Projection Scenarios

Three 10-year public school enrollment projection scenarios were developed to offer moderate, high, and low growth outcomes.

1. Moderate growth scenario:

Used last 10-years average for grade progression ratios; used last five-years average for kindergarten-to-birth ratio; used Woods and Poole Economics figures for birth projections.

2. High growth scenario:

Used last five-years average for GPR; used first five-years average for K-B ratio; used curve fitting model (quadratic curve) output for birth projections.

3. Low growth scenario:

Used mid-years average for GPR; used last 10-years average for K-B ratio; used curve fitting model (exponential curve) output for birth projections.

2016		6396	6009	5209
2017		6556	6083	5234

Notes:

1. Birth figures for 1990 through 2004 reported by the Tennessee Department of Health.
2. High growth: *Forecast Pro* curve fitting model: quadratic curve.
Moderate growth: Woods and Poole Economics, Population Under 1 Year of Age, 2005 data release for Knox County.
Low growth: *Forecast Pro* curve fitting model: exponential curve.

Figure 10

C. Systemwide Enrollment Projections

Presented in the following tables and graphs are the moderate, high, and low growth enrollment projection scenarios for the Knox County Schools system, 2007/08 through 2016/17.

IV. SCHOOL-BY-SCHOOL ENROLLMENT PROJECTIONS

A. Methodology

1. Overview:

The cohort-survival technique, with adjustments based on births, kindergarten-to-birth ratios, and grade progression ratios, was used to generate school-by-school enrollment projections in a manner similar to that used for the systemwide projections.

2. Inventory of public schools:

The Knox County Schools system is currently comprised of 12 high schools, 14 middle schools, and 50 elementary schools. Three elementary facilities are primary schools, with enrollment from kindergarten through second grade. They include Cedar Bluff, Farragut, and Sunnyview Primary Schools. Three additional facilities are intermediate schools, with enrollment from third through fifth grade. They include Cedar Bluff, Farragut, and Chilhowee Intermediate Schools. The boundaries of the intermediate school zones match those of the corresponding primaries (Cedar Bluff Primary-Cedar Bluff Intermediate, Farragut Primary-Farragut Intermediate, and Sunnyview Elementary-Chilhowee Intermediate). For the projections generated here, the three pairs of primary and intermediate schools were combined and treated as three elementary facilities.

3. Geographic scale of analysis:

The school-level projections prepared in this section of the study were compiled from *traffic analysis zones* (TAZs). TAZs are small geographic areas used by the Census Bureau and MPC planners to more closely study local demographic activity. (Knox County is comprised of 433 TAZs.) Because school zone boundaries change from time to time, it is not possible to examine historical trends in population and enrollment data for individual

schools. Also, since changes can occur in the near future, it would be shortsighted to generate a set of 10-year projections for zones that may cease to exist. Instead, the TAZs were chosen for the projections because their boundaries are very stable, and they readily fit within any school zone definition.

4. Base enrollment for projections:

The base population for the TAZ-level enrollment projections was the 2006/07 public school students in regular day classes. Students were assigned to TAZs based on their home addresses rather than by school currently attended. As a result, projections were generated by aggregating individual students to TAZ sums, and, in turn, matching them to current school zone boundaries. Since the projections did not begin at the school zone level, the effects of student transfers were removed, which can otherwise vary from year to year and from school to school.

5. Births:

The same birth data (actual and projected figures) used in the systemwide projections were applied to the TAZ-based projections. Births were allocated to TAZs based on the percentage share of households with children under 18 years of age reported in each TAZ (extracted from Census Bureau block data).

6. Kindergarten-to-birth ratios:

K-B ratios were calculated at the TAZ level using six years of kindergarten enrollment (by student address, assigned to TAZs, 2001/02 to 2006/07) and births from five years earlier (1996-2001).

7. Grade progression ratios:

GPRs were measured for each TAZ using six years of student enrollment records (by student address, assigned to TAZs, 2001/02 to 2006/07).

8. Methodology summary:

Ten-year enrollment projections were calculated for each TAZ then aggregated to match existing elementary, middle, and high school zone boundaries. Projections were made at the TAZ level following the same methodology as that applied in the systemwide enrollment projections, using the following information:

- a) Actual school enrollment, 2006/07.
- b) Average grade progression ratios, 2001/02-2006/07.
- c) Actual births, 2002-2004.
- d) Projected births, 2005-2011.
- e) Average kindergarten-to-birth ratios, 2001/02-2006/07.

B. Projection Scenarios

The TAZ projections were first treated as an unadjusted set of enrollment forecasts for 2007/08 to 2016/17, based on average GPRs for observed years 2001/02 to 2006/07, projected births from Woods and Poole Economics, and average K-B ratios for observed years 2001/02 to 2006/07. When summed for the whole system, the projections required adjustment to match the systemwide projection totals calculated earlier. Raw TAZ projections were adjusted in three scenarios to match the control totals for each of the moderate, high, and low growth scenarios developed for the systemwide projections.

C. School-By-School Enrollment Projections

Presented in the following tables are the moderate, high, and low growth enrollment projection scenarios for each elementary, middle, and high school in the Knox County Schools system, 2007/08 through 2016/17.
